HELENA, MONTANA 59604
(406) 449-2506

1 JANUARY 1981

TO MONTANA PILOTS:

THIS PACKET CONTAINS THE 1981 EDITION OF THE MONTANA
AIRPORT DIRECTORY.

USE THE DIRECTORY AS A SUPPLEMENT TO THE MONTANA
AERONAUTICAL CHART. THE CHART CAN BE PURCHASED
FROM THE MONTANA FIXED BASE OPERATORS OR FROM THE
OFFICE OF THE AERONAUTICS DIVISION ON THE HELENA
AIRPORT, OR BY WRITING TO P.O. BOX 5178, HELENA,
MONTANA 59604.

YOU ARE ALSO URGED TO FILE FLIGHT PLANS. THE
AERONAUTICS DIVISION OFFERS A MONTANA REGISTERED
PILOT FREE TELEPHONE SERVICE FOR FLIGHT PLANNING.
FOR MORE INFORMATION ON THIS SERVICE, PLEASE REFER TO
PAGE A-5.

HELP US KEEP INFORMATION CURRENT ON ALL MONTANA
AIRPORTS. IN YOUR TRAVELS THROUGHOUT THE STATE,
USE THE DIRECTORY TO ITS FULLEST. IF YOU NOTICE
ANY CHANGES, PLEASE INFORM US. YOUR COMMENTS AND
SUGGESTIONS ARE ALWAYS WELCOME ON NEW WAYS TO IM-
PROVE THIS SERVICE.

BEST REGARDS,

MICHAEL D FERGUSON, ADMINISTRATOR
AERONAUTICS DIVISION

Ruth Anderson	Clerk

This airport directory has been compiled from information submitted by airport owners, flight operators and interested pilots. Every effort has been made to provide a complete and accurate directory. Because airport conditions are constantly changing, the Montana Aeronautics Division assumes no responsibility for any action taken by a pilot on the basis of information contained herein.

Pilots are reminded it is their responsibility to check FAA Notices to Airmen for current information as well as making a visual inspection of the airport before using.

Twentieth Edition Revised to January, 1981

(P) denotes Privately Owned Airport.

REQUIREMENTS FOR USE OF MONTANA PILOT FLIGHT PLAN

1. All pilots must be registered and have a Montana registration number.
2. If NOT able to file by radio, pilots at non-Flight Service Station points in Montana are authorized to call the nearest Flight Service Station COLLECT to file or close Flight Plan.
3. No calls will be accepted from a point served by a Federal Aviation Administration Flight Service Station.
4. No restrictions are placed on either Private or Commercial flights.
5. Only Montana Flight Service Stations will accept the collect calls.
6. Federal Aviation Administration-Flight Service Stations will accept only calls for filing or closing flight plans or pre-flight weather advisory.
7. Pilot (at non-Flight Service Station Airport) places COLLECT phone call to nearest Flight Service Station. Flight Service Station personnel will ask for your Montana pilot registration number.
8. Please avoid calling during a weather broadcast.

LIGHT SIGNAL PROCEDURES FOR AIRPORT TRAFFIC CONTROL

Signals from a portable traffic control light shall mean the following:

Color and Type of Signal	On the Ground	In Flight
STEADY GREEN	Cleared for take-off	Cleared to land
FLASHING GREEN	Cleared to Taxi	Return for landing (to be followed by steady green at proper time)
STEADY RED	Stop	Give way to other aircraft and continue circling
FLASHING RED	Taxi clear of landing area (runway) in use	Airport unsafe—do not land
FLASHING WHITE	Return to starting point on airport	

ALTERNATING RED & GREEN	General Warning Signal — Exercise Extreme Caution.

AERONAUTICAL CHART SYMBOLS

The Montana Aeronautics Division is attempting to standardize symbols used on aeronautical charts. You, as a pilot, realize the difference encountered from state to state and even in the world aeronautical charts to the sectional charts. We have decided to use the new symbols at the top of each directory page to help familiarize you with the system which is being used on the Montana aeronautical chart. The National Association of State Aviation Officials agreed on symbol standardization and offered the following as the solution to an old problem. We hope a standard system will be adopted nationwide by all government agencies. We welcome your comments on this matter.

Public Airport
3684 L 41 U

3684-----Elevation in Feet
L-----Lighting
41-----Length of Longest Runway in
 Hundreds of Feet
U-----Unicom

U1...122.8 for landing areas
 (except heliports) without
 an ATC tower or FSS
U2...123.0 for landing areas
 (except heliports) with
 an ATC tower or FSS
U3...123.05 for heliports

SYMBOL

SOS

INSTRUCTIONS

1. LAY OUT SYMBOLS BY USING STRIPS OF FABRIC OR PARACHUTES, PIECES OF WOOD, STONES, OR ANY AVAILABLE MATERIAL

2. PROVIDE AS MUCH COLOR CONTRAST AS POSSIBLE BETWEEN MATERIAL USED FOR SYMBOLS AND BACKGROUND AGAINST WHICH SYMBOLS ARE EXPOSED

3. SYMBOLS SHOULD BE AT LEAST 10 FEET HIGH OR LARGER. IF POSSIBLE, CARE SHOULD BE TAKEN TO LAY OUT SYMBOLS EXACTLY AS SHOWN TO AVOID CONFUSION WITH OTHER SYMBOLS.

4. IN ADDITION TO USING SYMBOLS, EVERY EFFORT IS TO BE MADE TO ATTRACT ATTENTION BY MEANS OF RADIO, FLARES, SMOKE, OR OTHER AVAILABLE MEANS.

5. WHEN GROUND IS COVERED WITH SNOW, SIGNALS CAN BE MADE BY DRAGGING, SHOVELING OR TRAMPING THE SNOW. THE DEPRESSED AREAS FORMING THE SYMBOLS WILL APPEAR TO BE BLACK FROM THE AIR.

6. PILOT SHOULD ACKNOWLEDGE MESSAGE BY ROCKING WINGS FROM SIDE TO SIDE

SURVIVAL

1. Immediately after an emergency landing exit the aircraft if at all possible. Check for injuries but only give temporary first aid necessary to permit careful removal of casualties with serious injuries.
2. Stay away from the aircraft, if possible, until engines have cooled and spilled gasoline has evaporated.
3. After occupants are all out and a safe distance from the aircraft re-evaluate injuries and administer first aid as necessary.
4. If the weather is adverse, make or find temporary shelter.
5. Evaluate your location dangers: fire, sliding, rockfall, avalanche, terrain, weather.
6. Stay near the aircraft if at all possible. It contains the basic ingredients for warmth, shelter and signaling materials.
7. Turn on or make sure that your ELT is ON.
8. Signal for help. Do not neglect your aircraft radio. It is possible it may still be operational. Turn on squelch and volume and key the mike. If the results are positive, listen on a local or ATC frequency. When you hear a transmission transmit "MAYDAY - MAYDAY." If you should hear a jet, transmit on 121.5. All airlines and military aircraft monitor 121.5. If you do not hear any transmissions go ahead and transmit in the blind on these frequencies. Limit your transmissions to about one every fifteen minutes. Transmitting places considerably more drain on the battery than receiving. If both your ELT and radio are working, you will hear the ELT signal when listening on 121.5. It may be necessary to turn the ELT off when transmitting or listening on 121.5. (Don't forget to turn the ELT back on!)
9. If the weather is cold or wet you should not spend too much time trying to signal. Your prime effort must be directed toward conserving the energy you have.
10. Wings, rudder, etc., all may be used to make a shelter. Keep this shelter as small as possible to lessen the area your body must heat. Insulate shelters with boughs, bark, tarps, etc. Use **anything** to keep the rain from getting inside your shelter. Body heat loss is energy loss.
11. Your aircraft can fulfill most of your basic needs if you improvise. Think basic needs: Shelter (cover), warmth (fabric), tools (metal). Maps, newspaper, engine cover, plastic tarps all make excellent emergency bedding.
12. Build a fire, if possible. Don't forget that the aircraft gasoline is a valuable resource in starting a fire when only wet wood is available. Caution must be used when using gasoline. Soak or pour gasoline on the wood but be sure the container is out of reach when igniting the wood. Paper such as charts can also aid in getting a fire started. However, do not burn your charts for firewood. Paper makes an excellent insulation for bedding, clothing and shelter. NOTE: Pre-plan building a fire. Have an adequate amount of wood gathered to keep the fire going for a length of time prior to lighting.
13. In cold weather, insulation and upholstery from the craft make excellent material for overboots sleeping bags, mittens, hats, and ground insulation. Sew them together with salvaged aircraft wire. Put plastic side out for better wetness protection.
14. If running water is not readily available melt snow or ice in

improvised pot, or squeegee dew drops from aircraft surfaces. Place a sheet of plastic flat on the ground so that it may collect dew or condensation. If it is raining, place plastic sheet in ground depression to collect water.

15. Keep your signal fire burning all the time. Smoke and firelight can be seen from great distances. Both air and ground searchers will be looking for them.

16. Aircraft should be made **VISIBLE FROM THE AIR** if possible. Clear brush, cut trees, etc. Be prepared to make signals as aircraft approaches your area. Keep the mirror handy if the sun is shining. Practice its use.

17. Get your emergency signaling devices ready and have signal equipment handy. Every possible effort must be made to attract searchers to your location by signals—mirror, smoke, flares, color panels—and to sustain life and energy until assistance arrives.

18. Colored panels can tell a message. Pile brush in **SOS**. Stamp large, two feet wide letters **SOS** in the snow. Fill stamped marks with boughs or small brush.

19. Clear windows make a fair emergency mirror. **SIGNALS MAKE YOU EFFECTIVELY BIGGER.**

CAUTION

SURVIVAL WILL DEPEND GREATLY UPON YOUR STATE OF MIND. PSYCHOLOGICAL DISCIPLINE IS A MUST. YOU MUST SUSTAIN LIFE UNTIL RESCUED. REMAIN CALM! THINK!

SURVIVAL KIT

Compass

Tool Kit (small, light weight)

First Aid Kit

Food (Freeze Dried,

Candy Bars, Etc.)

Disposable Space Blankets

Saw

Matches (waterproof) & fire starter

Signaling Device(s)—(Flares,

Mirror, Strobe Light etc.)

Knife

50' 1/8" Nylon Rope

Garbage Sacks

Fish Hooks, sinkers and line

Can Opener, Sierra cup

Seal contents in a container

suitable to heat & store water

winter clothing & sleeping bags (during winter months)
